## Spectrometer

*Online measurement of nitrogen and carbon compounds*

### Water absorption spectrum analysis

OPUS is a high-end miniature spectrometer for on-line measurements of nitrogen and carbon compounds. By analyzing the water absorption spectrum, the sensor provides reliable measurements of  $\text{NO}_3\text{-N}$  and  $\text{NO}_2\text{-N}$  concentrations and organic parameters such as  $\text{COD}_{\text{eq}}$ ,  $\text{BOD}_{\text{eq}}$ ,  $\text{DOC}_{\text{eq}}$  and  $\text{TOC}_{\text{eq}}$ .

The spectral absorption analysis from 200 to 360 nm is refined by a calibration adapted to your application. 6 families of calibrations are proposed :

- Wastewater treatment plant inlet
- Wastewater treatment plant outlet
- Anammox process
- River water
- Sea water
- Drinking water

The instrument can be calibrated to measure one parameter or several simultaneously.

### Applications

- Processing control of wastewater treatment
- Resource Water Monitoring
- Drinking water control
- Industrial applications

### Advantages

- Accuracy and reliability by measurement of attenuation and full spectrum analysis of UV absorption 200 - 360 nm
- In situ and continuous measurements
- Optical window coated to minimize clogging
- Pre-installed application calibrations
- Automatic turbidity compensation

### Integrated into your facilities

The OPUS features the new G2 interface that allows quick access to sensor data and configurations using a web browser on computer, tablet and smartphone.

The sensor could be dived directly in the field, even in very heavy water, but also in bypass measuring cell (panel and measuring station).

The OPUS probe has many accessories to optimize its integration into the processes, automate its cleaning and facilitate the use of measurement data. Measurement campaigns and mobile applications are also possible with an optional battery system.

A xenon flash lamp emits broad spectrum light directed in a beam of parallel wavelengths towards the optical path through the sample. Compounds in water absorb light at specific wavelengths.

The light thus received is then diffracted and measured by a 256-channel photo-diode.

The probe then measures the attenuation of light to define the absorption spectrum of the water from 200 to 360 nm.

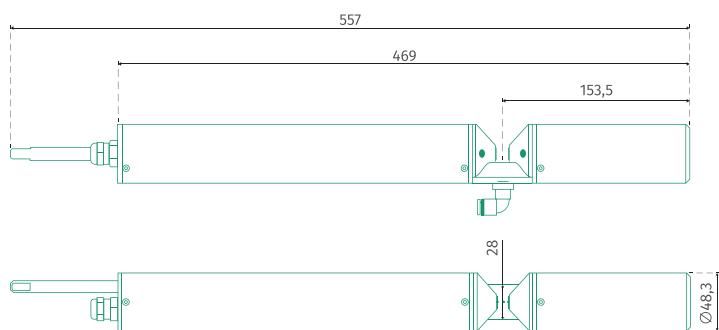

On the basis of a large number of absorption spectra records related to the application, the sensor performs a combination between the absorption spectrum obtained and the nearest water profile to refine the concentration calculations (LSA calculation rules ).

### Technical specifications

Light source	Xenon Flash Lamp	
Measuring technology	Detector	High quality miniature spectrometer
		256 channels
		200 to 360 nm
		0,8 nm/pixel
Principle of measurement		Attenuation measurement and absorption spectrum analysis
Optical path		0,3 mm, 1 mm, 2mm, 5 mm, 10 mm, 50 mm
Parameters		see list of parameters p.3
Measurement ranges		see list of parameters p.3
Measuring accuracy		see list of parameters p.3
Turbidity compensation		Automatic
Internal memory		2 GB
T100 response time		2 min
Measuring interval		> 1 min
Materials		Stainless steel (1.4571 / 1.4404) or titanium (3.7035)
Dimensions (L x d)		470 mm x 45 mm (with 10 mm optical path)
Weight		3 kg stainless steel - 2 kg titanium
Interface	Digital	Ethernet (TCP/IP) RS-232 ou RS-485 (Modbus RTU)
Power supply		12 ... 24 VDC (+/- 10%)
Consumption		< 8W
Maintenance		<0.5 h / month (standard use)
Calibration interval		24 month
Warranty		24 months in the European Union
Maximum pressure	SubConn connector	30 bar.
	Fixed connector	3 bar.
	FlowCell	1 bar. , 2 ... 4 L / min
Protection		IP 68
Temperature of the medium / sample		+ 2 ... + 40 °C
Ambient temperature		- 5 ... + 55 °C
Storage temperature		- 20 ... + 80 °C
Inflow velocity		0,1 ... 10 m/s
